

### SL-300 TEM-CELL

The **SL-300** TEM-CELL is ideally suited for those who require radiated immunity testing, but do not have a shielded room available. The **SL-300** features well-defined RF-fields at frequencies up to 300 MHz and is also superior with respect to the maximum allowable size of the equipment under test. The **SL-300** performs domestic and light industrial immunity tests even without the need of a booster, which is optionally available for heavy industrial tests. For smaller devices (EUT2), the field strength is four times higher. For Technical Specifications, please refer Pre-compliance Extended Test Set.
